13b

Do not glue the Spacer (29) too close to the Sliding Assembly. It must be held against the Side (17) but be able to move freely back and forth.

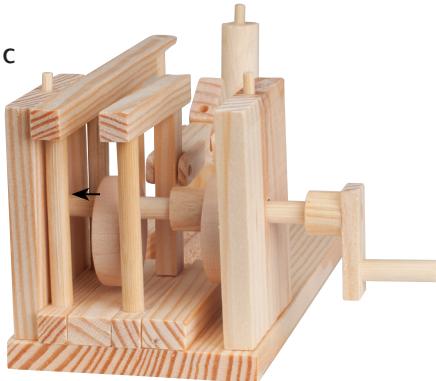

15b

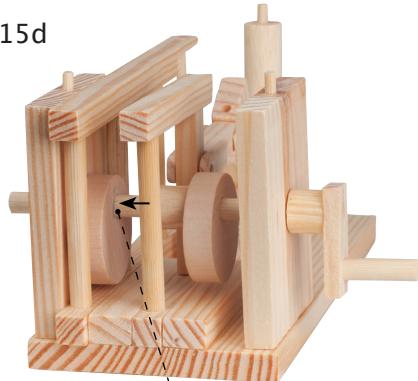

With the Handle Shaft pulled out by about 1cm push the Cam (32) furthest away from the Handle against the Side (17), put some glue on the shaft in front of the Cam and then push the Handle Shaft back in place, turning it as you do so. Then put more glue on the Handle Shaft, in front of the glued Cam and push up the Spacer (30), then put more glue on the Handle Shaft in front of the Spacer and push up the second Cam. Offset the two Cams as shown in the diagram. Try to make sure there is a 1mm gap between the first Cam and the Side so that the Cam does not rub against the Side.

15e

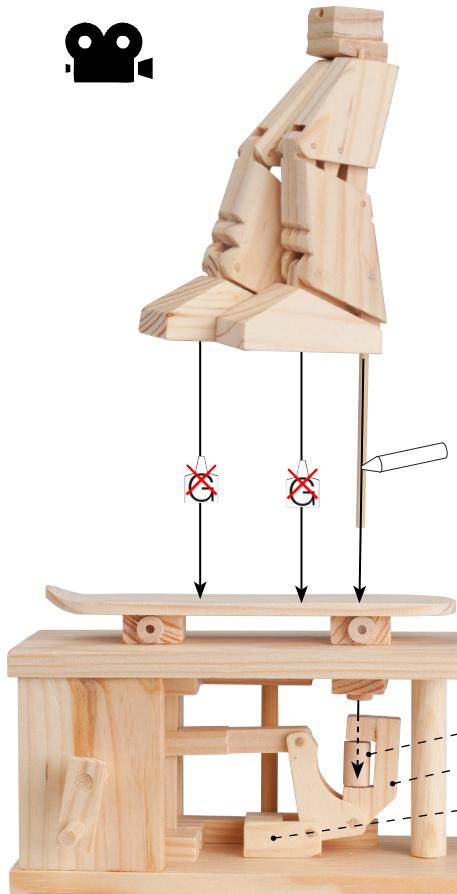

17**18****19**

With part 35 held between your finger and thumb, thread the 3mm x 66mm shaft (underneath the Left Foot) down through the Platform Top (33) and through into the hole in the top of part 35 (as shown). Turn the Handle so that the two Cams (32) are pointing one up and one down, then carefully lift up part 25 and put a dab of glue underneath it. Arrange part 25 so that it is parallel with the Sliding Assembly and it makes the back of part 27 parallel with the Vertical Column (18) as shown. Allow 10mins to dry then lift the Leg Assembly back out from the Platform Top.

Carefully use a cocktail stick to put glue into the top of part 35, then position it back inside part 27. Repeat threading the 3mm x 66mm shaft down through the Platform Top and through into the hole in the top of part 35. Then, whilst the glue is still drying, turn the handle so that the Cam (32) nearest the centre is pointing towards the Vertical Column (18). Make sure the soles of the feet are firmly pressed down against the Skateboard. Leave it in this position for 30mins until the glue is completely dry.

21

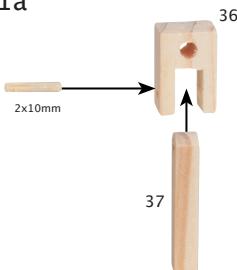

Turn the handle so that the Cam (32) nearest the centre is pointing away from the Vertical Column. Then carefully lift up the feet and put glue on the sole of each one and glue to the surface of the Skateboard.

Whilst the glue is still wet turn the feet so that they are at an angle of about 30 degrees to the Skateboard and leave about 1mm gap in between each foot to allow the legs to move freely when the handle is turned. Also position the feet so that parts 5 and 6 (in the ankle of the left foot) are vertical and in line with each other and not bent at an angle – this is important. You can do this by sliding the feet carefully backwards until the two parts in the ankle are vertical. Allow to dry for 20mins before turning the handle. When you do the Skateboard should swing from left to right and the legs should bend up and down at the knees and ankles.

Turn the handle to check the body tilts equally in each direction. Adjust the 2mm x 46mm peg glued into part 37 to alter the tilt whilst the glue is still wet.
